

Start of 2018 Update:

1. Unhides the counts from the Medication Count Record – *Individual (counts were previously not being displayed)*
2. Makes the Vitals Date/Time come from the signature if no Admin Date/Time is entered. *Previously, if vital was entered and wasn't signed it wouldn't display a Date/Time, now it will use the time off the Mar, or the signature or admin time to ensure a Date/Time is added.*
3. Admit date on the Individual Worksheet will not calculate for a Pending Resident it will only calculate for an Admission to Resident. *Now moving a lead to a pending resident will not create an admit date*
4. JSON Resident Data to BG now populates sendOnCreate to true. *Fixed the code for interface.*
5. DCed Med notification to the pharmacy provider needs to be labeled to DC'd. *Label change.*
6. DC'ing a Med will now remove any Held MARs in the future
7. Creates a new notification for Med Count Discrepancy.
8. Fixes the Charting - MAR Detail to use the setting for PRN from the resident's community record not the staff members record. *Fixes a bug when doing a follow-up on a PRN*
9. Fixes the Charting site so hovering over of a med with your cursor will not make the name disappear.
10. Pharmacy Label added to the Medication - Prescribed Layout
